

## Experiment : 5

Title : Automation and Optimization with Amazon S3

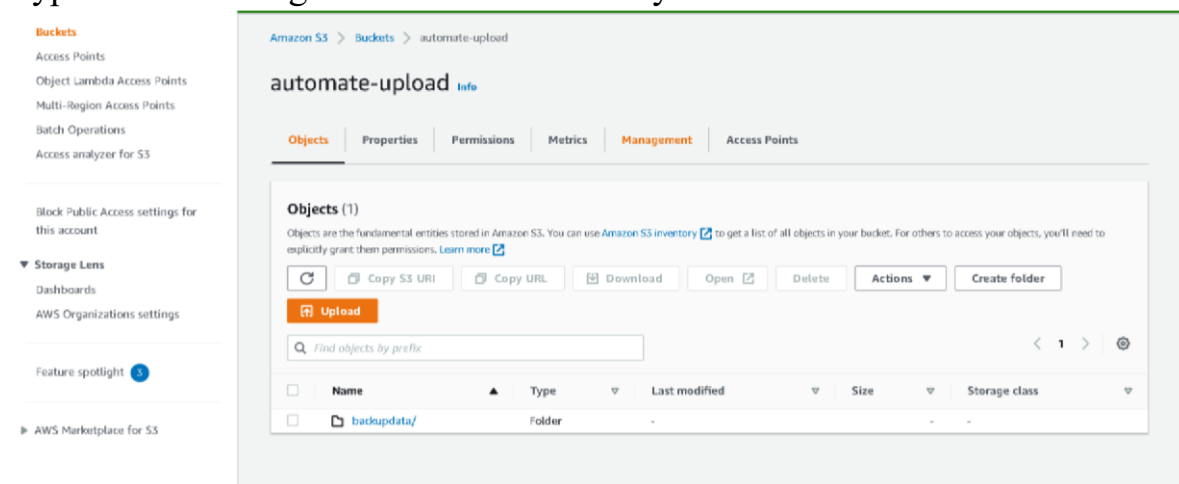

**Aim** : Automate Files backup to aws S3 bucket on Linux machine.

**Pre-requisites** : AWS Console, Amazon S3, crontab, aws cli

### Procedure :

Steps:

1. Create a S3 bucket.
2. Create a EC2 instance.
3. Give EC2 instance Role to access S3.
4. Connect to your EC2 instance CLI.
5. Type “sudo su” to give access root directory.

6. Create a directory “backup”. Type: mkdir backup
7. Go inside the “backup” directory.
8. Make some test files. Type : touch a

```

2022-09-19 08:27:17 paint-ad1543
[root@ip-172-31-32-239 ec2-user]# aws s3 ls automate-upload
PRE backupdata/
[root@ip-172-31-32-239 ec2-user]# mkdir backup
[root@ip-172-31-32-239 ec2-user]# cd backup
[root@ip-172-31-32-239 backup]# touch a
[root@ip-172-31-32-239 backup]# touch b
[root@ip-172-31-32-239 backup]# touch c
[root@ip-172-31-32-239 backup]# ls
a  b  c
[root@ip-172-31-32-239 backup]# aws s3 sync /root/backup s3://automate-upload

The user-provided path /root/backup does not exist.
[root@ip-172-31-32-239 backup]# aws s3 /backup s3://automate-upload
Note: AWS CLI version 2, the latest major version of the AWS CLI, is now stable and recommended for general use. For more information, see the AWS CLI version 2 installation instructions at
: https://docs.aws.amazon.com/cli/latest/userguide/install-cliv2.html

usage: aws [options] <command> [<subcommand>] [<subcommand> ...] [parameters]
To see help text, you can run:

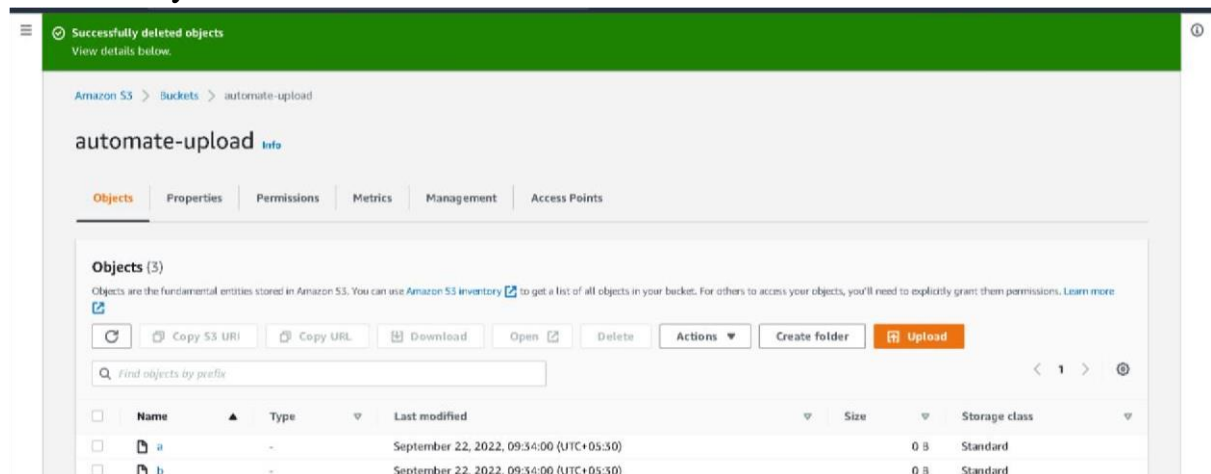

aws help
aws <command> help
aws <command> <subcommand> help
aws: error: argument subcommand: Invalid choice, valid choices are:

ls                               | website
cp                               | mv
rm                               | sync
ab                               | rb
pccsign

[root@ip-172-31-32-239 backup]# pwd
/home/ec2-user/backup
[root@ip-172-31-32-239 backup]# aws s3 sync /home/ec2-user/backup s3://automate-upload
upload: ./c to s3://automate-upload/c
upload: ./b to s3://automate-upload/b
upload: ./a to s3://automate-upload/a
[root@ip-172-31-32-239 backup]#

```

## 9. List them by cmd – ls

10. Now to sync these files of backup directory on the S3 bucket. Cmd : `aws s3 sync localfilepath s3://bucketname`

11. Now, we are going to create a cron job in order to automate this process.

Cmd : `crontab -e`

Enter the cmd : cron code `aws s3 sync /directory s3://bucketname`

For e.g. : cron code for 1 min is

(you may use [crontab.guru](https://crontab.guru) to create your own job expression)

URL : <https://crontab.guru/>

## AARHEE PHUKAN(RA2011028010092)

```
* * * * * aws s3 sync /home/ec2-user/backup s3://automate-upload

[root@ip-172-31-32-239 backup]# touch a
[root@ip-172-31-32-239 backup]# touch b
[root@ip-172-31-32-239 backup]# touch c
[root@ip-172-31-32-239 backup]# ls
a b c
[root@ip-172-31-32-239 backup]# aws s3 sync /root/backup s3://automate-upload

The user-provided path /root/backup does not exist.
[root@ip-172-31-32-239 backup]# aws s3 /backup s3://automate-upload
Note: AWS CLI version 2, the latest major version of the AWS CLI, is now stable and recommended for general use. For more information, see the AWS CLI version 2 installation instructions at : https://docs.aws.amazon.com/cli/latest/userguide/install-cliv2.html

usage: aws [options] <command> [<subcommand> ...] [parameters]
To see help text, you can run:

    aws help
    aws <command> help
    aws <command> <subcommand> help
aws: error: argument subcommand: Invalid choice, valid choices are:

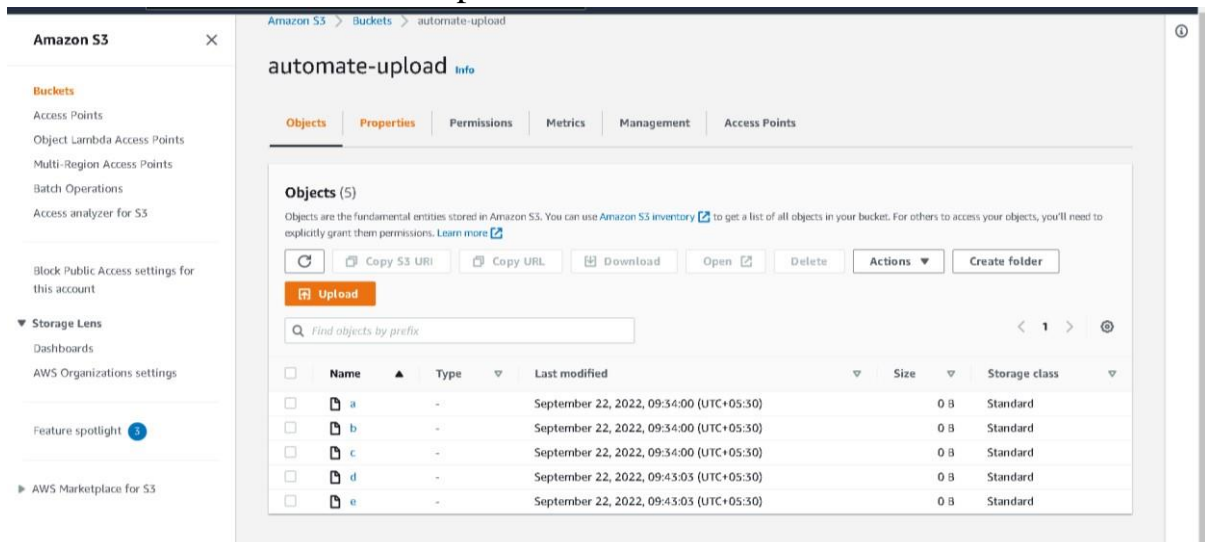

ls                               | website
cp                               | av
rm                               | sync
mb                               | rb
design
[root@ip-172-31-32-239 backup]# pwd
/home/ec2-user/backup
[root@ip-172-31-32-239 backup]# aws s3 sync /home/ec2-user/backup s3://automate-upload
upload: ./c to s3://automate-upload/c
upload: ./b to s3://automate-upload/b
upload: ./a to s3://automate-upload/a
[root@ip-172-31-32-239 backup]#
[root@ip-172-31-32-239 backup]#
[root@ip-172-31-32-239 backup]# crontab -e
no crontab for root - using an empty one
crontab: installing new crontab
[root@ip-172-31-32-239 backup]#
```

### 12.Restart the Crond service

Run “systemctl restart/stop/start cornd.service” to restart/stop/start your cron jobs respectively.

### 13.Now, we are going to create some test files to check if they are uploaded every minute or not.

### 14.File d and file e have been updated.

AARHEE PHUKAN(RA2011028010092)

**Result:**

We have successfully automated our local files/directory backup on Amazon S3 buckets using crontab.
